## Information in accordance with Article 33 of the REACH regulation

Dear business partner,

As usual, we would like to keep you up to date on normative trends and developments.

On 27 June 2018, the European Chemicals Agency (ECHA) updated the candidate list of Substances of Very High Concern (SVHC) according to Article 59 of the REACH Regulation (EC) No 1907/2006 with further substances, including lead. In accordance with Article 33 of the REACH Regulation, we provide our customers with information on ingredients that are on the candidate list.

In the gunmetal (CC499K) and other copper alloy products supplied to you, the substance lead (EC number 231-100-4, CAS number 7439-92-1) is used as an alloying element and is present in bound form in a concentration of more than 0.1% weight by weight (w/w).

The reference quantity for this alloying element content is the smallest product from a composite product.

Since the lead is firmly bonded in the alloys used, no additional information on safe use is necessary.

The above statements apply to all gunmetal articles supplied by us, which are available to you according to the known gross price list and the master data records of the corresponding industry portals.

All materials used by us are of course also listed on the positive list of the German Environment Agency (UBA) and comply with all valid specifications, regulations and standards.

For your information.

Yours faithfully,

Gebr. Kemper GmbH + Co. KG
